plant raisers 

2025/2026

Valued Customer,

We are pleased to announce the release of our **PLANT RAISERS SEED CATALOG 2025/26** containing vegetable seeds at unit.

In addition to the previous range, it contains innovative basil varieties combining diseases resistance to good flavor, attractive chicories, colorful hot and sweet peppers, specialty tomatoes, modern swiss chards, high performing watermelon varieties that cater to the evolving needs of seed distributors and growers worldwide.

We have transferred our customer - centric approach into developing varieties that are tailored to their needs.

We are aware that our success is directly linked to yours, therefore we are committed to providing our customers with the highest quality seeds and service with a unique "touch".

The particular attention we pay towards the varieties of the Mediterranean Area, to gustatory aspects and to the evolution of consumption models, distinguishes our offer.

Our team remains at your disposal to provide you all technical and commercial information.

Your preference to our products and your continued support, trust and loyalty are sources of great pride for us and, at same time, represent a big incentive to improve.

We invite you to leaf through our new seed catalog and discover the endless possibilities that await.

All the varieties shown in this catalogue are offered at unit.

For all the other vegetables and herbs offered at weight, you can refer to our catalogue "Il Seminatore".

A wide range of innovative varieties obtained by selecting plants with high content of essential oils to guarantee the intense, fragrant and fresh scent of Italian basil.

The **yuppy!** brand is a tool of guidance for consumers and of communication for growers.

"we speak seeds"®

DOWNY MILDEW RESISTANT

GENNY

(PRV-CPVO n° A202203661 Protected variety)

New variety of "Genovese Classico" type cultivated in Liguria. Compact plant. Suitable for pot production. Dark green leaves of "Genovese" type. Intense aroma. Intermediary resistance to downy mildew.

IR: Fob/Pb

SA 4004

Variety of the "Genovese" type. Smooth spoon-shaped leaf of bright green color with excellent aromatic spectrum. Compact plant with short internodes. Suitable for pot production. Intermediary resistance to downy mildew.

IR: Pb

GEMINI

(PVR-CPVO N° EU 55388 DEL 04-05-2020)

"Genovese" type with medium compact plant. Flat and small light green color leaves. High regrowth attitude. Suitable for open field and pot production in warm conditions. Intermediary resistance to downy mildew and resistance to fusarium.

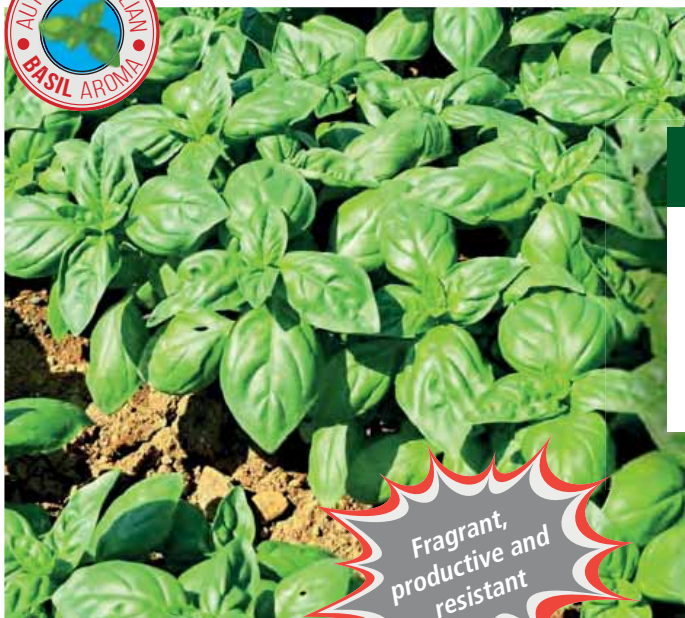

IR: Fob/Pb

Pb: Peronospora belbahrii

Thanks to the intermediate resistance, the plant can produce even under pressure of disease. The crops must be properly protected against the pathogens.

BASIL

Fragrant,
productive and
resistant

GENTILE

(PVR-CPVO: N° 20212249 Protected variety)

Very uniform line of "Genovese Classico" type cultivated in Liguria. Vigorous plant, medium compact. Dark green leaves of "Genovese" type. Intense aroma. Suitable for open field and fresh cut cultivation. Intermediary resistance to downy mildew.

IR: Pb

Excellent
yield in open
field

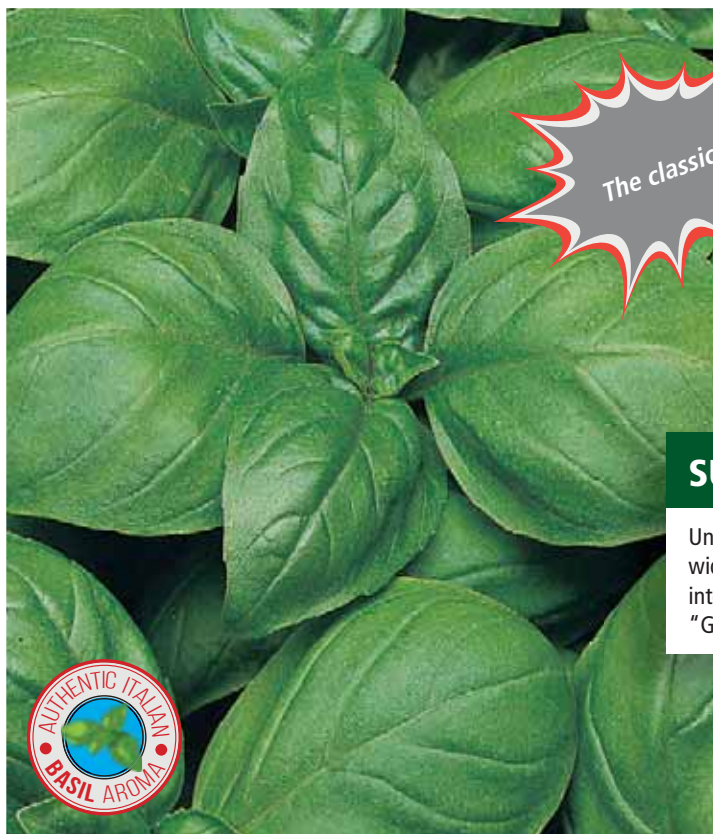

SA 121.1025

Variety of the "Genovese" type. Plant with broad, smooth spoon-shaped leaves of bright green color with excellent aromatic spectrum. Fast-growing plant with excellent yield in open field. Ideal both for processing and for fresh market. Intermediary resistance to downy mildew and fusarium.

IR: Fob/Pb

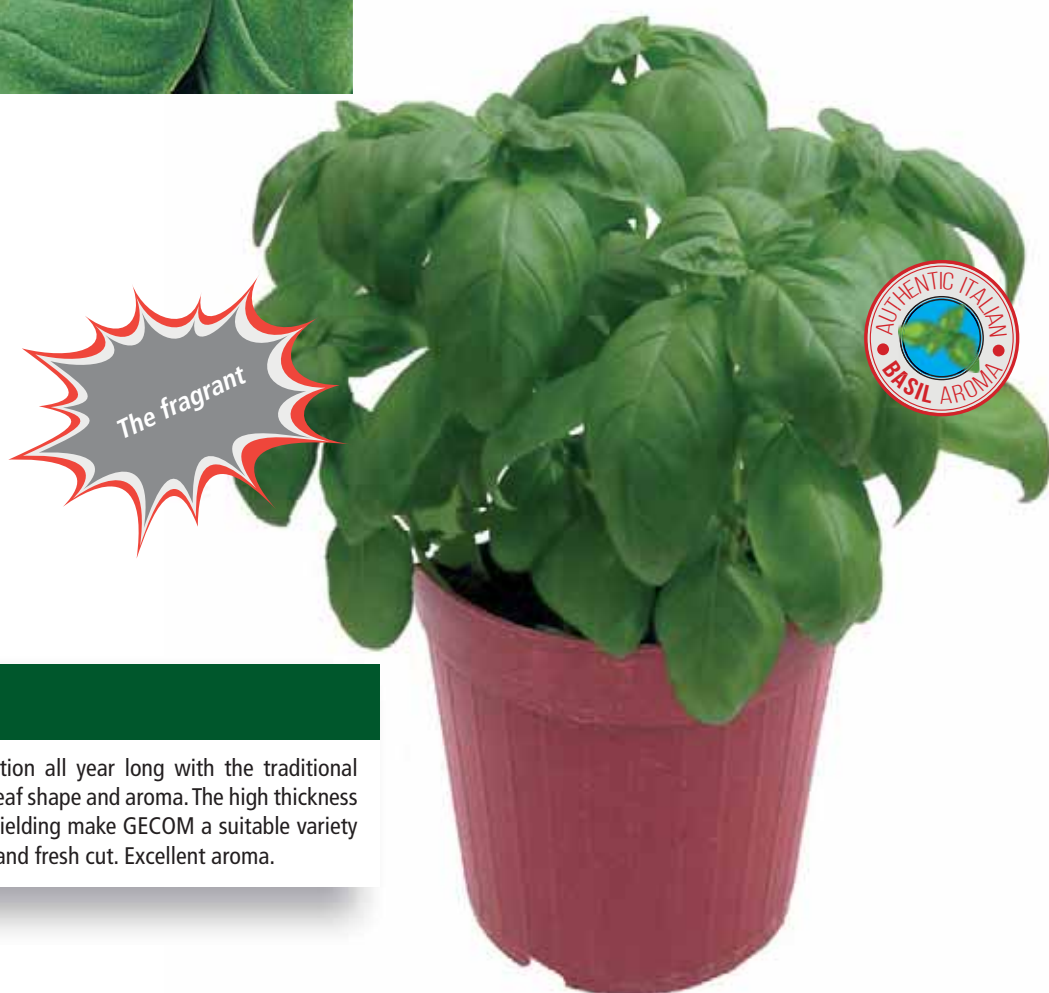

FOR PROCESSING - FOR TRADITIONAL "GENOVESE" BUNCHING

The classic

SUPERBO

Uniform line of "Genovese" type. Medium compact line, wide leaves, spoon shaped with dark bright green color. Very intense and excellent flavor. Suitable for "pesto", for traditional "Genovese bunching" and for processing market.

The fragrant

GECOM

Suitable for pot production all year long with the traditional characteristics of color, leaf shape and aroma. The high thickness of the leaves and high yielding make GECOM a suitable variety both for pot cultivation and fresh cut. Excellent aroma.

BASIL

FOR POTS

The dark green

GEMMA

GEMMA is more compact and darker than GECOM. GEMMA is our most versatile basil. It is suitable for high quality pots but can be used for fresh cut. Excellent aroma.

GENIALE

Extremely compact plant with very short internodes. Thick leaves, spoon shaped, with very intense green color. Suitable for pot production in warm conditions. Excellent aroma.

The compact

OTHER TYPES

GLACIALE

Shrubby plant, with medium sized leaves, tolerant to low temperatures.

GREEK BALL

Very compact plant with very short internodes and ball shape tuft. Small leaves of medium green color.

SMALL LEAVED

Medium size plant with semi-erect habit of growth, small lanceolate medium green leaves.

BASIL

TUSCANY LETTUCE LEAVED

Medium sized plant with large, thick, blistered leaves, light green colored.

LEMON

Medium tall plant. Small lanceolate leaves, with a pleasant lemon aroma.

CANNELLA - CINNAMON

Shrub plant. Elongated and glossy leaves, green in colour with purplish shades. Cinnamon taste.

RED RUBIN

Medium sized plant with flat intense red leaves, with indented margin. Violet flower calyx, with intense purple petals.

BROCCOLI

GENTLEMEN F1

Hybrid broccoli variety, early ripening (80 days from transplanting) with compact fine-grained corymb, dark green color. Side shoot production.

High number
of shoots

CHINESE CABBAGE

CONCORD F1

Chinese cabbage for late summer sowing, compact cylindrical head of about 1,5-2,0 kg weight. Early ripening (70 days after transplanting) and excellent shelf life.

BRUSSELS SPROUT

DANET F1

Nice mid-late hybrid with low stem. The firm well covered sprouts are round, nicely colored (yellow inside) and easy to pick. Danet is a variety tolerant to frost.

SAVOY CABBAGE

SAVOY EMPEROR F1

Round savoy cabbage, early cycle (80 days from transplanting), with intense green blistered leaves. Spring/fall variety.

BRASSICAS

CABBAGE

PORTOZA F1

Round-oval cabbage, mid-late cycle (130 days from transplanting), mid green color.

ROOKIE F1

Round cabbage, attractive red color, early cycle (75 days from transplanting). Harvesting period spring/fall.

UNIKAT F1

Round cabbage, early maturity (80/85 days from transplanting), mid green color. Spring/fall variety.

POINT ONE YR F1

Early variety, ripening at 50 days from transplanting (spring sowing) or 55-60 days from transplanting (summer sowing). Pointed compact head. Average weight kg 1-1,5.

HR: Foc 1

KALE

NERO DI TOSCANA O PALMIZIO SENZA TESTA

Black cabbage, rustic, resistant to low temperatures. Blistered dark black leaves.

KALE LAGE MOSKRUL

Kale or Curly kale is a variety of the lacinate cabbage with green colored, sturdy, rippled, highly indented leaves. Strong and robust plant. Leaves can also be used as baby leaf.

BRASSICAS

CAULIFLOWER

ROMANESCO OTTOBRINO

"Romanesco" type cauliflower, with cone head, sulphurous green, early cycle (75/80 days from transplanting).

SNOW CROWN F1

Very early cauliflower (70 days from transplanting) with white, compact fine-grained corymb.

MYSTIQUE F1

Medium compact plant with erect and wrapping leaves. Pure white corymb, well tight, ripening in 80 days from transplanting. Harvesting period end of summer and fall.

SNOW PRINCE F1

Plant with erect and wrapping leaves. Pure white corymb, well tight, ripening in 120 days from transplanting. Harvesting period from fall to spring.

DI SICILIA VIOLETTO

Round violet cauliflower, very good taste, mid-late (110/130 days from transplanting).

A geographical range

CATALOGNA - TURF

PIGNA

"Galatina" type chicory. Big head, it produces short close "puntarelle" forming a compact cone, semi-early varie

PAN DI ZUCCHERO

Mid cycle variety for fall harvest. Quite big head, cylindrical, light green color with white veins.

CATALOGNA GIGANTE DI CHIOGGIA - SEMPER

Mid late variety with white ribs and intense green leaves, mid indented. Resistant to cold, and suitable for fall sowing and spring harvest.

CHICORY

CHIOGGIA TYPE

PALLA ROSSA 3 - ROSSA DI CHIOGGIA 3

Early variety for sowing in mid-summer. To be harvested from fall onwards.

PALLA ROSSA 2 - ROSSA DI CHIOGGIA 2

Very early, for spring and early summer sowing, and harvest at the beginning of fall.

PALLA ROSSA 5 - ROSSA DI CHIOGGIA 5 - RONDA

Late variety, for sowing in mid-late summer. To be harvested at the end of fall.

GORIZIA - VERONA - TREVISO TYPES

ROSA DI GORIZIA

This variety is perfect for winter crops and needs forcing. It has an open head and a bright red with shades of pink.

ROSSA DI VERONA PRECOCE

Short cycle variety with small head, moderately wrapped, red bright color with intense white veins.

ROSSA DI TREVISO 4 - ROSSA DI TREVISO PRECOCE - SINCRO

For open field cultivation, it does not need to be forced. To be harvested from early fall onwards.

CHICORY

VARIED - SPOTTED

VARIEGATA DI CHIOGGIA

Big headed variety, green-whitish color, red marbled. Late cycle. To be harvested in early winter.

VARIEGATA DI CASTELFRANCO - MASERA

Selection of self-whitening late cycle. It has thick white leaves with purple/red curved edges.

VARIEGATA DI CASTELFRANCO

Medium-sized head, yellowish-green color, red marbled, semi-late cycle. Variety to be forced.

VARIEGATA DI LUSIA

Medium-sized head, light green color, light red marbles.
Mid-late cycle variety to be harvested at the end of summer / beginning of fall.

CHICORY

SPECIALTIES

ROSA

Medium big tuft, light pink with cream-pink shades. Cycle of 95-100 days.

BIANCA INVERNALE

"Bianca di Lusìa" type, mid-late cycle, quite big head, for fall harvest.
Very tolerant to cold temperatures.

VERDORO

Compact tuft, yellow color. Outside leaves green colored and bright golden inside. Cycle of 80-85 days.

CELERY

DARKLET F1

Hybrid plant with upright habit, compact head of medium height with full ribs. Bright green leaf color. High tolerance to pre-flowering and to emptying allows harvesting in hard conditions

CUCUMBER

SAGRO F1

Vigorous compact plant, early cycle, fruits 20/22 cm long, cylindrical, dark green, lightly spined.

IR: CMV/Px

BURPLESS TASTY GREEN F1

Monoecious hybrid, early cycle variety. Vigorous plant, high yielding. Fruits are 30-40 cm long, dark green, with white small spines. Very sweet and digestible, thanks to the "burpless" feature.

IR: Pcu/Px

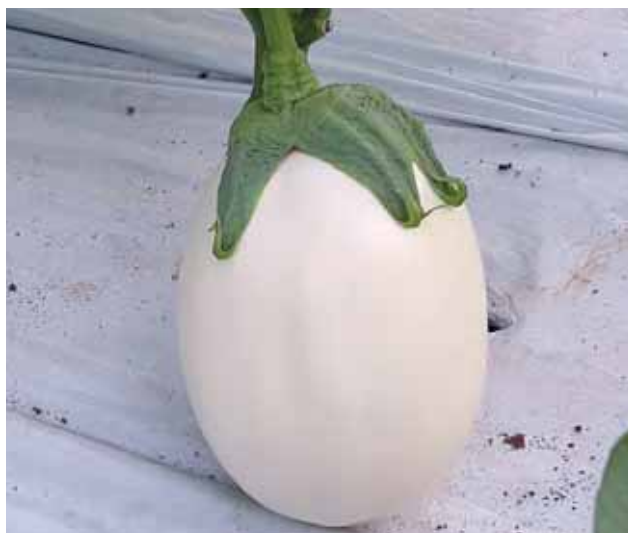

POLIGNANO

Medium vigorous plant, early cycle, suitable for open field and greenhouse cultivation. Typical squat shaped fruits, 16-18 cm long, smooth bright green skin and white flesh, not bitter.

From our research ... the colors increase

CHROMATIC

LUNA F1

Vigorous plant, early cycle. Round fruit, white, with green calyx. Big size.

ROXANNE F1

Mid vigorous plant with assurgent posture, mid-early cycle. Oval fruit, white, with violet stripes and green thornless calyx. Medium-big size.

ROSANTICA F1

Vigorous plant, suitable for open field and greenhouse cultivation. Round fruit, big size, very bright light violet color. Green calyx with violet shades. White flesh.

ROSABELLA F1

Variety of a lilac/violet type with an early mid cycle, suitable for greenhouse and open field, with a mid vigorous plant. Round/oval fruits of excellent size with green thornless calyx and white flesh.

RUBRA F1

Vigorous plant early cycle, suitable for greenhouse and open field cultivation. Suggested distance along the row 75 cm minimum. Round fruits, big size, bright purple color with dark violet calyx and white undercalyx. White and very sweet flesh .

EGGPLANT

ELONGATED

MORELLA F1

Rustic and high yielding plant, suitable for open field cultivation. Long cylindrical fruits, bright black, with green calyx.

ARIANE F1

Vigorous plant, with internodes of medium length. Early cycle. High yield. Suitable for greenhouse and open field cultivation. Clavate-elongated fruit, very bright black colored, with green thornless calyx. Average weight 300-350 gr. White flesh with few seeds.

ELETTRA F1

Tall and vigorous plant, with medium long internodes. Suited for greenhouse and open field cultivation. Long fruit, around 20-25 cm. Black and bright fruit. The black color endures even in summer conditions in open field. Green almost thornless calyx.

High yield

TETI F1

Vigorous plant with good fruit setting, medium-late cycle, for greenhouse and open field cultivation. Elongated fruits, big size, black and very bright color, green thornless calyx. Average weight 300-350g. White flesh with few seeds.

EGGPLANT

OVAL / ROUND

NINFA F1

Medium-early cycle, tall and vigorous plant. High yielding. Suited for greenhouse and open field cultivation. Oval fruit, uniform calibre. Bright black color with green almost thornless calyx. Weight 400-450 g. White flesh.

GIOIA F1

Vigorous plant, with medium-short internodes, medium-early cycle. High yield. Suitable for cultivation in open field and greenhouse. Round-oval fruit, bright, with intense and uniform black color, with green calyx. Fruit average weight of 420-450 gr. White and compact flesh with few seeds.

MYRNA F1

Early cycle. Medium vigorous plant with good leaf coverage, fertile. Oval fruit, medium-big size, bright black color. Weight 400-450 g. Green calyx. White flesh. Suited for greenhouse and open field cultivation.

SAMBA F1

Early cycle. Medium vigorous plant with good leaf coverage, fertile. Oval fruit, medium-big size, bright black color. Weight 400-450 g. Green calyx. White flesh. Suited for greenhouse and open field cultivation.

117 SA 413 F1

Medium-short internodes, medium-early cycle. High yield. Suitable for field and greenhouse. Uniform black colored, with green calyx. Round fruit average weight of 420-450 gr. White and firm flesh with few seeds.

ENDIVE

ENDIVE ESCAROLE

GIGANTE DEGLI ORTOLANI - MAESTRO

Late cycle variety with voluminous heavy plant. For winter production in European conditions. High tolerance to cold temperatures.

ASCOLANA

Mid-late cycle, voluminous plant with dark green leaves and lighter green heart. Good resistance to low temperatures. For winter production.

CORNETTO DI BORDEAUX

Late cycle variety with rustic plant. Central leaves make a "horn shaped" heart, easy to blanching. For winter productions.

ENDIVE

CURLED ENDIVE

WALLONE

Rustic and voluminous variety for fall-winter cultivation. Compact head with large curled leaves. Suitable for fall and winter production.

RICCIA CUOR D'ORO

Rustic and quite big variety, with curled indented leaves and a cream yellow heart. Suitable for spring and summer cultivation.

EDAMAME

SYED 121 SA 100

Edamame are legumes, also called "beans soybeans." They are very popular in Asian cuisine and are an excellent source of protein and provide many health benefits.

LETTUCE

MIRELLA

Butterhead lettuce with medium-dark green leaves, mid tuft. Suitable for different growing cycles in open field.

MARAVILLA DE VERANO

Anthocyanic batavian lettuce with quite big and heavy tuft. Suitable for spring and fall cultivation.

SALADIN

Iceberg with big serrated tuft, vigorous plant, smooth mid-green leaves, very shiny.

ROSSO DI TRENTO - DOLOMITI

Red batavia typical of Northern-East Italy, with big tuft. Suitable for spring and fall cultivation.

Professional quality on ever green varieties

GREAT LAKES 118

Iceberg lettuce with light green, upright, and crunchy leaves.
Year-round cultivation.

BARBA DEI FRATI

"Catalogna" type with intense green leaves, suitable for open field cultivation. Voluminous tuft, with semi-erect habit of growth, for spring and fall cultivation.

LOLLO

Medium-sized plant, light green leaves, very curled.
Suitable for spring and fall cultivation.

LOLLO ROSSA

Medium-sized plant, very intense and bright red leaves.
Suitable for different growing cycles, open field cultivation.

LETTUCE

PARRIS ISLAND COS

Mid green romaine, resistant to high temperatures and to bolting. Compact tuft with lightly blistered leaves. Spring/summer cycle.

MONTEGO

Green romaine with rustic plant and a heavy voluminous tuft. Suitable for fall and winter cultivation.

BIONDA DEGLI ORTOLANI - SANNY

Blonde romaine with large erect tuft. Tolerant to bolting. For spring-summer cultivation.

VERDE DEGLI ORTOLANI - VERDIANA

Green romaine with large erect tuft. Tolerant to bolting. For spring-summer cultivation.

MORTARELLA VERDE D'INVERNO

"Short romaine" type with good tolerance to cold temperatures for fall/winter cultivation. Medium-sized compact tuft.

MORTARELLA DI PRIMAVERA

"Short romaine" type with quite good tolerance to bolting for spring cultivation. Medium-sized compact tuft.

MELON

WRANGLER F1

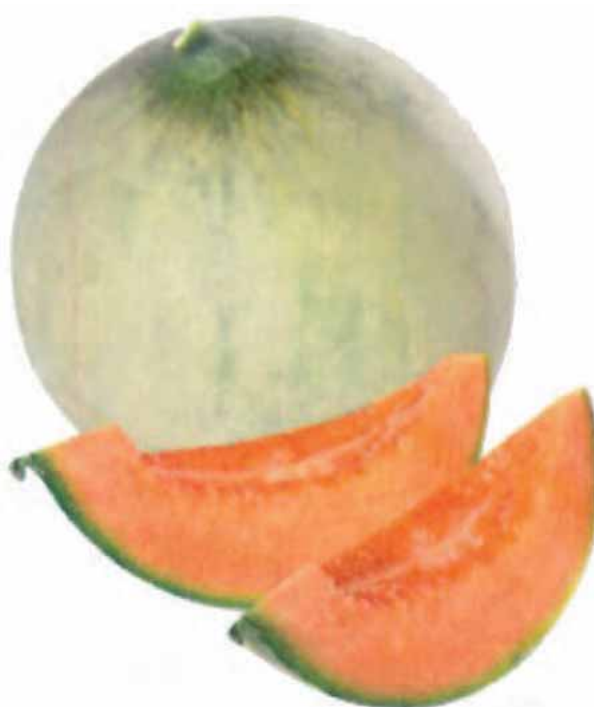

Open field variety, good size fruits, marked slices, good netted. Intense orange flesh, with high brix content.

HR: Fom:0,1,2

IR: Px

SUMMER DREAM F1

Open field variety, good size fruits. Intense orange flesh, with high brix content.

Extra early

TROPEA ROSSA TONDA - RECORD

Short day variety. Round onion with bright red tunics and a very sweet taste. Suitable for bunching onion production all year round.

MUSONA

Intermediate day variety. Globe shaped onion, slightly elongated, with white tunics. Suitable for bunching onion production all year round.

Ideal for onion braids

TROPEA ROSSA LUNGA

Intermediate day variety. Elongated red onion, with a very sweet taste. Suited to be used as bunching onion to be produced all year round.

PARSLEY

TECHNOLOGY APPLIED TO THE SEED

GIGANTE D'ITALIA - CAPUT

Rustic plant with strong long stalk and large leaves, highly indented, dark bright green. Very vigorous plant.

COMUNE 2

Medium growing plant with mid-thin stalk, finely divided leaves, medium green, highly aromatic.

FRISÉ VERT FONCÉ

Compact plant, fine curly leaves, indented, very dark green color.

ROCKET

SELVATICA A FOGLIA FRASTAGLIATA - GIUDITTA

Wild rocket. Selection with a very rustic plant, thick dark green leaves, very indented, highly aromatic.

CORIANDER

CORIANDOLO O PREZZEMOLO CINESE - MICROCARPUM

Annual variety with small seeds, slow bolting. Plant with erect habit of growth, with big composite smooth leaves, well divided, medium-green color, very aromatic. Both seeds and leaves can be used.

FOR POT PRODUCTION

AGUILERA

Hot variety. Medium compact plant, suitable for open field cultivation, 40-50cm high. Bunchy fruits, 40-50mm long and 15mm wide at neck, medium-green turning to bright red when ripe.

STROMBOLI

Hot variety. Medium compact plant, suitable for open field cultivation, 40-50cm high. Bunchy fruits, 40-50mm long and 15mm wide at neck, medium-green turning to bright red when ripe.

ETNA

Hot variety. Compact plant, suitable for open field, greenhouse and pot cultivation, late cycle. "Tabasco" type fruits, 30mm long and 10mm wide at neck, arranged in bunches, dark green color turning to bright red when ripe.

HOT PEPPER

FOR GROUND CULTIVATION

TUONO F1

Hybrid cayenne type with rustic and very high yielding plant. Cone-shaped fruits with thin flesh, medium green, intense red when ripen. Very hot.

IR: Pc

GRISÙ F1

Medium vigorous plant, fertile, high yielding, medium-early cycle, suitable for greenhouse and open field cultivation. Smooth horn shaped fruits, about 120-150 x 30 mm, dark green color turning to dark red at maturity. Mid- high hot.

HR: Tm:0-2

BUSILLIS F1

Early cycle. Vigorous and fertile plant. Conical fruits, big size, 17-20 x 4-5 cm. Dark green fruits, bright red at ripening. Suited for open field and greenhouse cultivation. Scoville units: 2.000.

IR: Tm:0,1,2

JAPO F1

Vigorous plant with good fruit setting, early cycle, suitable for greenhouse, open field, and pot cultivation. "Jalapeño" type fruits, 70 x 20 mm, very dark green color, dark and bright red when ripe. Mid-high hot.

HOT PEPPER

CAPPERINO F1

Bushy plant, very fertile, mid cycle, suitable for open field, greenhouse and pot cultivation. Round fruits, 30-35mm diameter, dark green color, deep red when ripe, with thick and deep red flesh. Mid spicy.

HR: Tm:0

COCCINELLA F1

Quite compact plant, vigorous and high yielding. Globe-round fruits, dark green, intense bright red when ripe. Very hot.

HR: Tm:0

PEPPINO F1

Medium vigorous bushy plant, high yielding, early cycle, suitable for greenhouse, open field and pot cultivation. "Topepo" fruits, flat and globe shaped, about 20 x 40-50mm, dark green color turning into dark red when ripen, very thick flesh. Mid spicy.

HR: Tm:0

Hot and extra hot

CHILI PEPPER

HABANERO ORANGE

Vigorous plant, late cycle. "Lantern" shaped fruits, 40-50mm x 20-30mm at the bottom, green color, orange when ripen. Very hot.

HABANERO YELLOW

Vigorous plant, suitable for open field cultivations, late cycle. Small lantern shaped fruit, 40-50mm x 20-30mm, green color, lemon yellow at maturity. Very hot.

HABANERO RED CARIBBEAN

Vigorous plant, suitable for open field cultivations, late growing cycle. Small lantern shaped fruit, 40-50mm x 20-30mm, green color, lemon yellow at maturity. Very hot.

HABANERO CHOCOLATE

Vigorous plant, late cycle. "Lantern" shaped fruits, 40-50mm x 20-30mm at the bottom, green color, brown when ripen. Very hot.

HABANERO WHITE

Vigorous plant, late cycle. Lantern shaped fruit, 40-50mm x 20-30mm, pale green and white-cream at full ripening. Very hot.

CAROLINA REAPER

Vigorous plant, suitable for open field cultivation, late cycle. Irregular shape of the fruits that gives them a rugged aspect, wrinkled, 60-80mm x 30-40mm, red color. Extra hot.

TRINIDAD MORUGA SCORPION-RED

Vigorous plant, late cycle, suitable for open field cultivation. Lantern shaped fruit with point at the end as scorpion tail, wrinkled skin, 40-50mm x 20-30mm, pale green color and red at ripening. Extra hot.

TRINIDAD MORUGA SCORPION-YELLOW

Vigorous plant, late cycle, suitable for open field cultivation. Lantern shaped fruit with point at the end as scorpion tail, wrinkled skin, 40-50mm x 20-30mm, pale green color and yellow at ripening. Extra hot.

NAGAINA F1

Naga morich hybrid, with compact plant and early cycle. High yielding. Irregular fruit, rough skin, 30-40mm long and 10-15mm wide, green color and bright red at ripening. Super hot.

NAGA MORICH

Vigorous plant, suitable for open field cultivation, late cycle. Irregular shaped fruit, rough skin, 30-40mm long and 10-15mm wide, light green color and bright red at maturity. Super hot.

NAGA MORICH CHOCOLATE

Vigorous plant with high yielding, late cycle. Suited for open field and greenhouse cultivation. Irregular shaped fruit with rough skin, 40-50mm x 15-20mm, pale green color and brown at ripening. Super hot.

BHUT JOLOKIA

Vigorous plant, suitable for open field cultivation, late cycle. Truncated cone shape with wrinkled skin, 70-100mm x 20-30mm, mid green color, brilliant red when ripen. Super hot.

JAMAICAN SCOTCH BONNET

Very vigorous plant, late cycle. Flat and round fruit, 30-40mm high and with a diameter of 40-50mm, light green color and yellow-orange at full ripening. Very hot.

ACRATA

Tall plant with upright growth, well branched with slightly elongated and hairy leaves. Elongated fruit, long 50-80mm, very tasty, green color, violet at turning stage and deep red at full ripening. Excellent option to Cayenne. Very hot.

FATALII

Vigorous plant, late cycle. Elongated fruit, thinner at the bottom, 60-70mm x 20-25mm at the top, green and bright yellow at full ripening. Very hot.

DA NEYDE

Vigorous plant with dark green leaves, medium-late cycle. Purple fruit, almost black at ripening.

TABASCO

Vigorous plant with very high yielding, medium-late cycle. Conical fruit, 40 mm long, bright red at ripening.

CHILI PEPPER

DIAVOLICCHIO CALABRESE

Small leaf plant with growth of fruit clusters. Fruits have a tapered shape, slightly oval with a tip that slightly curves in a peculiar way.

CALABRESE LUNGO

Strong plant, perfect for intensive fields and greenhouses. It is a spicy fruit from the "cayenne" type, with a thin medium green and bright yellow/orange pulp when mature.

CALABRESE GIALLO

Strong plant, perfect for intensive fields and greenhouses. It is a spicy fruit from the "cayenne" type, with a thin medium green and bright yellow/orange pulp when mature.

KISKA

Medium determined plant with an early cycle, perfect for intensive field cultivations, greenhouses and pots. They are spicy fruits (40 mm. long and 10/12 mm wide at the collar), which form dark green and bright orange clusters when mature.

CAYAMBE F1

Determined plant, perfect for pot cultivations and border crops. These are red spicy fruits when mature, divided in clusters with a extended-conical shape (60x10 mm).

AJI AMARILLO

The plant from this variety of hot pepper looks like a small tree, with green oval big leaves and falling flowers with a white corolla and some yellow spots on petals. The fruit dimension can reach up to 15 cm of length and 4/5 cm of width. When fully mature, it is yellow-orange.

CHILI PEPPER

CHUPETINO

Strong plant, perfect for intensive field cultivation and greenhouses. These spicy fruits have a particular round shape, they are not very big and slightly extended on the extremity. Finally, they are green and red when mature.

SEVEN POD

Very strong plant with pendulous habit. The fruits are similar to the habanero but the peel is wrinklier. The color changes from light green to orange and red when mature.

AGUILERA

A spicy fruit. Medium strong plant, perfect for intensive field cultivations and with a 40 to 50cm length. The fruit clusters are 40 to 50 mm long, 15 mm wide at the collar of a medium green colour and a bright red when mature.

FUJI

A spicy fruit. Vigorous plant, perfect for pot and open field cultivation. Conical shaped fruits that points up with a yellow color that shifts to an orange and bright red when mature.

TAMU

Spicy fruit. Determined plant, with a medium vigorous height that reaches 25-30 cm. This plant is good for pot and open field cultivations. The fruits are from the "cayenne" type, oriented up, 10/12 cm long of a medium green color which becomes red when mature.

LAUTARO

Spicy fruit. Determined plant, vigorous and perfect for pot and open field cultivations with an early cycle. The fruits are 40 mm long and 15 mm wide, they are up-oriented and divided in purple, orange and bright red clusters when mature.

BATUR

Spicy fruit. Determined and vigorous plant. Round and bright fruits divided in clusters of a green color with purple and red shades when mature.

SWEET PEPPER

SNACK

PIE F1

Compact plant, high yielding and with an easy fruit setting even at high temperatures. Suitable for open field and greenhouse cultivation. Cone-shaped smooth fruits, 6-7 cm long and 3-4 cm wide, dark green turning to bright red when ripe. Sweet taste, easy to digest.

SUGAR F1

Compact plant, high yielding and with an easy fruit setting even at high temperatures. Suitable for open field and greenhouse cultivation. Cone-shaped smooth fruits, 6-7 cm long and 3-4 cm wide, dark green turning to bright yellow when ripe. Sweet taste, easy to digest.

HR: Tm:0

Uniform
earliness, shape
and size

GELLY F1

Compact plant, high yielding and with an easy fruit setting even at high temperatures. Suitable for open field and greenhouse cultivation. Cone-shaped smooth fruits, 6-7 cm long and 3-4 cm wide, dark green turning to bright orange when ripe. Sweet taste, easy to digest.

HR: Tm:0

BLOCKY, HALF LONG, ELONGATED

114 SA 202 F1

Vigorous, compact, very productive, medium cycle plant, suitable for protected and open field crops. Square fruits of medium-large size, mm. 9 x 9, without hollow, very uniform, dark green and intense red when ripe, with rapid color change. Very thick flesh, medium weight g.350.

IR: TSWV

MANNAL F1

Vigorous compact plant, fertile, mid cycle, suitable for greenhouse and open field cultivation. Blocky fruits, big size, 100x100mm, very dark green color turning to deep red when ripe, thick flesh, average weight 350-400g.

IR: TSWV

Very high
yield

ASCANIO F1

Vigorous plant, fertile, mid-early cycle, for greenhouse and open field cultivation. Quadrilobate elongated fruits, big size, 140 x 100-120mm, dark green color turning to deep red when ripe, thick flesh, average weight 300-350g.

HR: Tm:0

IR: TSWV

ALCEO F1

Tall and vigorous plant, fertile, mid-early cycle, suitable for greenhouse cultivation. Quadrilobate elongated fruits, big size, 180 x 100mm, dark green color turning to deep red when ripe, medium thick flesh, average weight 300-350g.

HR: Tm:0

IR: TSWV

SWEET PEPPER

SATRAPO F1

Compact rustic plant, high yielding. Blocky fruits (10 x 10 cm), sweet, dark green, yellow when ripe.

HR: Tm:0

SAVIO F1

Compact rustic plant, high yielding. Blocky fruits (10 x 10 cm), sweet, with thick flesh, red when ripe.

HR: Tm:0-2

ORENY F1

Compact plant, suitable for greenhouse and tunnel cultivation. The fruit is large, thick-wall blocky, dark green turning to intense orange when ripe.

THEOS F1

Medium vigorous plant, quadrilobate elongated fruits, big size, thick flesh, very dark green, uniform bright yellow when ripe.

HR: Tm:0

GAON F1

Medium vigorous plant, quadrilobate elongated fruits, big size, thick flesh, very dark green, intense bright red when ripe.

HR: Tm:0

CONICAL

MATTADORES F1

Vigorous plant, "bull's horn" type fruits, big in size, dark green color, intense red when ripe.

HR: Tm:0-2

DIMITRI F1

Vigorous plant, good fruit-setting, early cycle, suitable for greenhouse and open field cultivation. Smooth cone shaped fruits, 200-220mm long, 50-60mm wide, mid pale green color turning to bright red when ripe. Crunchy flesh.

HR: Tm:0-2

GIUBILEO F1

Vigorous plant, "bull's horn" type fruits, big size, dark green, bright yellow when ripe.

SWEET PEPPER

TROFEO F1

Vigorous plant with high yielding. Suited for greenhouse and open field cultivation. "Bull's horn" type, long 220-230 mm and large 50-60 mm, dark green and bright red at ripening. Thick and sweet flesh.

HR: Tm:0-2

IR: TSWV

TSWV
resistant

118SA301 F1

Vigorous plant with high yielding. Suited for greenhouse and open field cultivation. Bulls horn type, big in size, dark green color, intense red when ripe.

big size

SWEET PEPPER

COCCO F1

Vigorous plant with high fruit-setting, mid-early cycle, suitable for greenhouse and open field cultivation. "Topepo" type, smooth, dark green color bright red when ripe. Medium-small size. Sweet and crunchy flesh.

HR: Tm:0-2

IR: TSWV

FRIGGITELLO

Very rustic variety with mid vigorous plant. Small fruits (60-70 mm long, 25 mm large at the collar), cone shaped, with lightly flatten apex, sweet flesh, green, red when ripe.

FRIGGITELLO (3 POINTS)

Very rustic variety with mid vigorous plant. Small fruits (60-70 mm long, 25 mm large at the collar), cone shaped, with apex at 3 points, sweet flesh, green, red when ripe.

ORNAMENTAL PUMPKIN

ASPEN F1

Classic Halloween with orange skin (5/9 kg).

The classic

CHALLENGER F1

"Halloween" type pumpkin with orange skin. Weight 10-12 kg.

IR: Px

TURBANTE TURCO

"Turban" shaped variety, red with variegated stripes (1.5/3 kg).

MIX FRUTTI PICCOLI

A mix of several little fruits, different in shape and color. Average weight 250-500 g.

MUSQUÉE DE PROVENCE

Vigorous indeterminate growing vines, very high yielding. Big fruits, from 7-8 to 15-20 kg weight depending on the growing conditions, flat shape, very ribbed, smooth brown-orange skin, thick intense orange flesh, excellent shelf life.

QUINTALE A SEME GIALLO

Vigorous plant with indeterminate growth. Roundish fruits of a very large size, slightly ribbed and flattened at poles. Skin of a nice yellow/orange color, intense yellow flesh.

KAWAII LADY F1

Early cycle. Vigorous plant with high yielding. Flat-globe fruit, dark green-grey color, ribbed. Small fruit, average weight 350-450 g. Suited for fresh market

PUMPKIN

ASTERIX

Vigorous plant, very high yielding. Round fruits slightly flattened at poles with green-gray skin orange speckled. Weight 4-6 kg. Consistent orange flesh. Excellent shelf life.

MARINA DI CHIOGGIA

Vigorous indeterminate growing vines, very high yielding. Flattened fruits, medium size, 2-3 kg, very wrinkled skin, dark grey-green color, sweet yellow flesh.

BERRETTA PIACENTINA

Vigorous plant. Round fruits flattened at poles with smooth skin and grey-green color. Average weight 5-7 kg. Yellow-orange flesh. Excellent shelf life.

HUCHIKI KURI

Vigorous indeterminate growing vines, very high yielding. "Hokkaido" type roundish fruits, mid-small size, 1-2 kg weight, smooth orange-red skin, very sweet dark yellow flesh.

ITALIAN

CORTA PIENA DI NAPOLI

Vigorous indeterminate growing vines, very high yielding. S.A.I.S. selection with fruit of 4-5 kg weight, cylindrical shape, dark green skin with orange stripes when ripens. Dark orange flesh, fine, with seed cavity only in the final part of the fruit, high organoleptic qualities and good storability.

LUNGA DI NAPOLI

Vigorous indeterminate growing vines, very high yielding. A new selection with very big fruits, from 15-20 to 30-35 kg weight, cylindrical shape, dark green skin with orange stripes when ripens. Dark orange flesh, fine, with a seed cavity only in the final part of the fruit, high organoleptic qualities and good shelf life.

VIOLINA LISCIA

Vigorous plant, very productive, early cycle. Mid-large size, quite smooth pale orange-pinkish skin, average weight 3-4 kg. Sweet, firm, bright orange flesh.

VIOLINA

Vigorous indeterminate growing vines, very high yielding. Mid-big fruits, 3-4 kg weight, wrinkled orange-pink skin, sweet firm flesh with bright orange color. Suitable for fresh market and for processing.

PUMPKIN

BUTTERNUT

The butternut
for everyone

FRISCO F1

Vigorous indeterminate growing vines, early cycle, high yield of homogeneous fruits. Big size fruits, with large "neck", 2-3 kg weight, smooth, lightly grooved skin of a light orange color, sweet firm bright orange flesh.

AVALON F1

Vigorous indeterminate growing vines, early cycle, high yield of homogeneous fruits. Medium size fruits, 1,5-2 kg weight, smooth light orange skin, sweet firm orange flesh.

VICTORY F1

Vigorous plant, early cycle. High yielding of uniform fruits. Half elongated fruits, average weight 1-1,5 kg, smooth pale orange skin. Sweet, firm, bright orange flesh.

PUMPKIN

LAGENARIA SICILIANA

Pole variety with very long vines. Cylindrical elongated fruits, pale green color. Fruits, sprouts and young leaves can be used.

The extra long

TROMBETTA

Vigorous plant with long vines. Fruits are pale green, cylindrical, long and thin. Trumpet shaped and yellow color when ripe.

The Italian classic

SQUASH

ROUND

EIGHT BALL F1

Bushy plant, high yielding. Round, dark bright green fruits.

GIOCONDA F1

Semi-erect plant, with short internodes, early and high yielding. Round, light bright green fruits.

IR: WMV/ZYMV

ITALIAN REGIONAL WITH PERSISTANT FLOWER

ALBERELLO DI SARZANA

Medium vigorous bushy plant. Mid-long cylindrical fruits of a pale green color slightly speckled and voluminous inflorescence.

GABBIANO F1

Bushy plant, vigorous and very productive. "Genovese" type fruits, cylindrical, very light green color, persistent flower.

FLAMINIO F1

Bushy plant, vigorous and very productive. "Romanesco" type fruits, ribbed, medium light green color with dark green stripes, very big flowers, fleshy and well tied to the fruit.

AQUILONE F1

Bushy plant, cylindrical lightly ribbed fruits, medium green with light speckles. Persistent flower well tied to the fruit.

SQUASH

CYLINDRICAL

PALOMA F1

Bushy vigorous and very productive plant. Cylindrical fruits, lightly clubbed, very light green color, uniform, bright.

IR: WMV/ZYMV

HSR 4777 F1

Eskenderany type. Vigorous and erect, open plant habit. High yielding. Very uniform fruit, cylindrical, pale green color.

IR: WMV/ZYMV

GRINGO F1

Bushy plant, "grey" type fruits, lightly clubbed, green-grey color with darker longitudinal marbles.

IR: WMV/ZYMV

STAR 8024 F1

Compact and productive plant. Cylindrical fruits, medium green color, medium size.

IR: WMV/ZYMV

SWEET CORN

Super sweet

IMPRESS F1

Super sweet variety (sh2) with early cycle (82 days). Mid tall vigorous and rustic plant. Cylindrical ear, 20/25 cm long, with 16/18 kernel rows. Bright yellow kernels, very sweet and firm.

HR: MDMV

IR: Ps:Rp1d/Et

Diversity, uniformity, purity

SWISS CHARD

FOR RIBS

Tolerant to cold

Resistant to bolting

ARGENTATA 2

Tuft with many leaves with semi-erect habit of growth, very broad silvery-white stems and ribs, tender, fleshy and very tasty. The dark green leaf blades are of considerable size, very fleshy with medium blistered surface. It can be grown all year round to produce young plants that are sold in bunches and for autumn and winter production of very large tufts whose leaves are mainly sold in bunches.

ARGENTATA 3

Semi-early variety suitable for tuft production during spring and beginning of summer, with quite good tolerance to bolting. Plant with semi-erect habit of growth with dark bright green blistered leaves and broad white stem.

CANDIDA

Vigorous plant with dark green erect leaves and white stalks. Slow to bolt and suitable for spring and summer production.

SIBILLA

Fall/winter-early spring growing cycle, sowing end of August, early September. Plant with erect habit of growth, about 60 cm high, oval elongated and lightly blistered leaves with curled margins, intense green color, wide glossy white stalks.

BARESE

Compact plant with erect habit of growth, mid size smooth dark green leaves, white thick stalks of a medium length. For winter cultivation.

SWISS CHARD

COLORED

BRIGHT LIGHTS

Variety with stems of many colors and leaves in varying shades of green. It has a delicate flavor. Suitable for production all year round, used both as baby leaf and for bunching.

RHUBARB CHARD

Variety suitable for production all year round, used mainly as "baby leaf". Compact tuft, with ruby red color stalks and veins, smooth medium bright green leaves.

BRIGHT YELLOW

Variety with medium green leaves and bright yellow stalks. Suitable for production year round, used both as "baby leaf" and for bunching.

FOR CUTTING

LISCIA VERDE DA TAGLIO O ERBETTE-ROMAGNA

All season variety, particularly suited for cutting. Mid tuft. Abundant leaves with smooth margin, lightly blistered, intense green color. Stalk with light green veins.

All - season

MAPEI

All-season variety with an upright plant habit, mainly used for cutting. Large, elongated, smooth, medium bright green leaves and medium narrow white rib.

ROUND CHERRIES

CHIPANO F1

Cherry with very rustic and high yielding plant. Medium fruits (20/22 g), vivid bright red, with strong rachis. Good tolerance to cracking, even in open field production.

HR: ToMV:0-2/Fol:0/Va:0/Vd:0

Extra
sweet

PRALYNA F1

Indeterminate variety, suitable for long cycle. Medium vigorous plant, with high yielding. The plant can reach up to 3-5 kg yield / plant if topped at the 10th cluster, grown with 2 stems. When grafting is necessary, a rootstock of intermediate vigor is recommended. Long and elegant cluster, 16-18 fruits.

Regular and strong rachis with 6-8 fruits. Cherry fruit, bright red, small size, 20-25 gr. Very sweet variety. Brix 9°.

HR: ToMV:0-2/Fol:0,1

IR: TYLCV/Ma/Mi/Mj

MYGLIORITO F1

Indeterminate plant, suitable for long cycle. Vigorous plant, high yielding, medium-early cycle. Long and elegant cluster with strong rachis, 14-16 fruits. When grafting is necessary, a rootstock of intermediate vigor is recommended. It can reach an average yield of 5-7 kg/plant, if topped at the 10th cluster, grown with two stems. Cherry fruit, round, bright red color, medium size, around 25-30 gr. Good tolerance to cracking. Good taste, brix around 8°. Long shelf life.

HR: ToMV:0-2/ Fol:0,1

Early-medium cycle. Vigorous plant with short internodes Suitable for greenhouse cultivation in spring transplanting and in "counterseason". Regular cluster, 5-6 fruits with strong rachis and calyx. Round fruit, firm, L.S.L., vivid red color. Average weight 120 g. Good shelf life.

HR: ToMV:0-2/Fol:0,1/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

IRVIN F1

Mid-early cycle. Strong plant, suited for long cycle cultivation. Excellent fruit setting even with warm temperature. Regular cluster, strong with 6 fruits. Globe shaped fruit with strong calyx. Deep red fruit at ripening. Very firm pulp. Average weight around 200-220 g. Excellent shelf life. EMEA area.

HR: ToMV:0-2/FF:A-C/Fol:0,1

IR: TWSV/TYLCV

GREEN TO RED

YUP F1

Indeterminate plant, easy to manage, vigorous, very versatile, suitable for cultivation in conditions of high salinity. Long cycle and double branch breeding. Medium vigor rootstock is recommended. Regular cluster of 6-8 fruits. Rounded, dark green fruit with a very marked neck that remains in the ripening phase. Red color veraison. Average weight 60g. Excellent flavor.

HR: ToMV:0-2/Fol:0,1

IR: TYLCV/Ma/Mi/Mj

120 SA 201 F1

Indeterminate plant, easy to manage, vigorous, very versatile, suitable for cultivation in conditions of high salinity. Long cycle and double branch breeding. Medium vigor rootstock is recommended. Regular cluster of 6-8 fruits. Rounded, dark green fruit with a very marked neck that remains in the ripening phase. Red color veraison. Average weight 60-70g. Excellent flavor.

HR: ToMV:0-2/Fol:0,1

IR: TYLCV/Ma/Mi/Mj

INDETERMINATE TOMATO

The classic deep green

WEB F1

Green shoulder tomato with vigorous and high yielding plant. Globe shaped fruits (250/300 g), dark bright green with light shoulder.

HR: ToMV:0-2/Pf:A-E/Fol:0,1/For/Va:0/Vd:0

IR: TSWV/Ma/Mi/Mj

WOODY F1

Vigorous plant, high yielding, medium cycle, suitable for greenhouse and open field cultivation with transplanting until late spring Globe shaped fruit, slightly flat, dark and bright green color with light shoulder. Big size, average weight 300-350g.

HR: ToMV:0-2/Ff:A-E/Fol:0,1/For/Va:0/Vd:0

IR: TSWV/Ma/Mi/Mj

MARMANDE

The "romanesco"

SAROM F1

"Pantano romanesco" type, with rustic high yielding plant. Ribbed flat fruits (200/250 g).

HR: ToMV:0-2/Fol:0/Va:0/Vd:0

The marmande for everyone

VERONICA F1

Vigorous plant, very productive. Flat fruits, ribbed, bright green with accentuated shoulder, mid/big size, 250/300 g, attractive color when turning to red, and bright red when ripe.

HR:ToMV:0-2/Pf:A-E/Fol:0,1/For/Va:0/Vd:0

IR: Ma/Mi/Mj

Extra ribbed

MARMO F1

Vigorous plant with excellent allegation. Suitable for cultivation in high salinity conditions. "Costoluto fiorentino" kind of fruit, markedly ribbed, dark green fruit with pronounced neck. Attractive color when turning into deep red color, very bright once ripe. Excellent flavor. Suitable for harvest both during the phase of veraison and when fully ripe.

HR: ToMV:0-2/Fol:0/For/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

INDETERMINATE TOMATO

Suitable to high salinity condition

MARMYTO F1

Vigorous plant, high yielding even in high salinity conditions. Suitable for long cycle. A medium vigor rootstock is recommended for this variety. Flat, pronouncedly ribbed, dark green fruit with pronounced neck. Attractive color when turning into red and good shelf life. Excellent flavor in high salinity conditions.

HR: ToMV:0-2/Fol:0/For

IR: TYLCV/Ma/Mi/Mj

Excellent flavor

MARYNELLA F1

Vigorous plant and very productive. Flowering continuity also in stress conditions. Long cycle variety suitable for double branch breeding. Flat fruit, beautiful ribbing of dark green color with very marked shoulder. Nice coloring at turning stage, ripening to red. Medium-large size. Excellent firm, also in the post-harvest. Size and color do not change in the presence of water low conductivity

HR: ToMV:0-2/Fol:0,1/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

The big Red

MARMALYSSA F1

Vigorous plant with good fruit-setting. "Marmande" fruit, ribbed, big size (300-350g), dark green with marked shoulder and bright red at full ripening. Excellent taste.

HR: ToMV:0-2/Ff:A-E/Fol:0,1/Va:0/Vd:0

IR: TSWV/TYLCV/Ma/Mi/Mj

The "chocolate" color

CAPPUCCINO F1

Vigorous plant, high yielding. Flat fruits, ribbed, with marked shoulder, dark green bright color. Brown-red at turning stage and chocolate color when ripe. Big size. Good taste.

HR: ToMV:0-2/Pf:A-E/Fol:0,1/For/Va:0/Vd:0

IR: TSWV/TYLCV/Ma/Mi/Mj

MARYSOLE F1
(ex 121 SA 411)

Vigorous and productive plant. Keeps on flowering even under stress conditions. Beautifully ribbed flattened fruit, of dark green in colour with very pronounced collar. Beautiful colouring at turning stage, ripening to red.

MARYLUNA F1 (ex 121 SA 402)

Productive plant of medium vigour. A medium vigour rootstock is recommended, if necessary. Beautifully ribbed flattened fruit, dark green in colour with very pronounced collar. Beautiful colouring at turning stage, ripening to red. Medium-small size. High flavour, excellent balance between acidity and sugar content.

HR: ToMV:0-2/Fol:0/For/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

PINKMARMA F1 (ex 118 SA 451)

Vigorous indeterminate plant with good productivity Large size fruit (250g), flattened, ribbed, bright green color with marked neck, pink when ripe. Compact flesh and excellent flavor.

HR: ToMV:0-2/Fol:0/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

INDETERMINATE TOMATO

Midi plum

MIDI PLUM / SALADETTE

OWALYTO F1

Vigorous plant, suitable for greenhouse cultivation. Plant with very regular internodes and high yielding. Regular cluster with oval fruits, slightly pointed, bright red color, average weight 40-50 g. Excellent firmness and shelf life

HR: ToMV:0-2/Fol:0/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

POPPY F1

Vigorous plant, with a good foliar cover. High yield. Excellent setting also with high temperatures. A two-branche farming is recommended and, if necessary, the use of a medium vigour rootstock. Regular and sturdy cluster, with about 8-10 fruits. Oval fruit, red brilliant colored. Excellent texture in the post-harvest. Fruit size unchanged even on high stages. Good tolerance to the apical rot.

HR: ToMV:0-2/Fol:0/Va/Vd

IR: TYLCV/Ma/Mi/Mj

Big size

MYRABILE F1

Medium vigorous plant, high yield and good fruit setting. It is recommended the use of a rootstock of high vigor. Regular and strong cluster, with about 6 fruits. Elongated fruit, regular and elegant, bright green colored and intense red when ripe. Large size. Excellent consistency that is maintained even when fully ripe. Variety suitable for both green and red harvesting.

HR: Fol:0,1/Va:0/Vd:0

IR: TSWV/TYLCV/Ma/Mi/Mj

Very firm flesh

116 SA 604 F1

Strong plant with high yielding. Suited for long cycle cultivation. Good fruit setting even in warm temperature. Oval fruit, very bright with deep red color at ripening. Very firm flesh. Excellent shelf life.

HR: ToMV:0-2/Fol:0/Va/Vd

IR: TYLCV/Ma/Mi/Mj

ELONGATED

TORRANO F1

Medium vigorous plant, good yield and good fruit setting. Regular and strong cluster, with about 6 fruits. Elongated fruit, regular and elegant, bright green colored and intense red when ripe. Medium-large size Excellent consistency even when fully ripe. Variety suitable for both green and red harvesting.

HR: ToMV:0-2/Fol:0,1/Va:0/Vd:0

IR: TSWV/Ma/Mi/Mj

MAGYCO F1

Very vigorous plant, good fruit setting. Plant adaptable to the double branch farming. If the rootstock is necessary, it is recommended a medium vigorous rootstock. Elongated fruit, with a color of brilliant green and intense red when ripe. Medium large size, about 120-140 g Excellent consistency, that it is maintained when fully ripe. Variety suitable for both green and red harvesting.

HR: ToMV:0-2/Fol:0/Va:0/Vd:0

IR: TYLCV/Ma/Mi/Mj

TIREN F1

Vigorous plant, elongated fruits (120/130 g) with the typical San Marzano neck, marked shoulder.
